(Received October, 23, 1986)

### INTRODUCTION

A comprehensive literature survey on the plants of family *Apocynaceae* has revealed that several genera such as *Ervatamia*, *Alstonia*, *Aspidosperma*, *Geissospermum*, *Hunteria*, *Kopsia*, *Picralima*, *Vinca*, *Rhazya* and *Rauwolfia* are rich in indole alkaloids.

The drugs derived from plants are widely used in developing countries, because of their ready availability, cheapness, sociocultural effects and less toxicity as pronounced by the traditional practitioners (*Hakims*). In this connection particular mention could be made of *Rauwolfia* species. The fact that its physiologically active principles are alkaloids was first pointed out by Greshoff [1], while preliminary studies in the constituents of *Rauwolfia serpentina* Benth were initiated in 1890 by Dymock, et al. [2].

Systematic literature survey on the chemical constit-

tuents of *Rauwolfia* species was first undertaken by Leo Marion [2a] in 1952 and in 1953 Asima Chatterjee (nee Mookerjee) reviewed the same along with their pharmacology [2b]. In 1956 C. Pakrashi and Asima Chatterjee, Satyesh and G. Werner reported the chemistry of *Rauwolfia* alkaloids in a voluminous monograph [2c]. Later on in 1960 another rich review on *Rauwolfia* alkaloids was written by J.E. Saxton and E. Schlittler in 1965 [2d].

Though there is not yet any evidence that the interest in indole alkaloids has declined sufficient new material has accumulated to warrant an up-to-date summary. The present short review deals with the list of alkaloids so far isolated from various *Rauwolfia* species (Table 1). The alkaloids are arranged in alphabetical order together with their molecular formulae, melting points and specific rotation. It is rather interesting to know that so far two hundred and four alkaloids have been isolated from various *Rauwolfia* species.

Table 1. List of *Rauwolfia* alkaloids.

Name	mp (°C)	Molecular formula	Specific rotation	References
Ajmalicidine	235-36	C <sub>21</sub> H <sub>26</sub> N <sub>2</sub> O <sub>4</sub>	[α] <sub>D</sub> <sup>20</sup> + 190° (C)	190
Ajmalicimine	217-18	C <sub>21</sub> H <sub>26</sub> N <sub>2</sub> O <sub>3</sub>	[α] <sub>D</sub> <sup>20</sup> + 209° (C)	193
Ajmalicine	252-54	C <sub>21</sub> H <sub>24</sub> N <sub>2</sub> O <sub>3</sub>	[α] <sub>D</sub> <sup>23</sup> - 58.1° (C)	3, 17-22, 111, 134
Ajmalidine	241-42	C <sub>20</sub> H <sub>24</sub> N <sub>2</sub> O <sub>2</sub>	-	126, 134
Ajmalimine	188-89	C <sub>30</sub> H <sub>36</sub> N <sub>2</sub> O <sub>6</sub>	[α] <sub>D</sub> <sup>20</sup> + 105° (C)	192
Ajmaline	158-60	C <sub>20</sub> H <sub>26</sub> N <sub>2</sub> O <sub>2</sub>	[α] <sub>D</sub> <sup>23</sup> + 128° (C)	3, 7-16, 104, 105, 114, 118
